

SUMMARY (AS OF JULY 2026)

76 publications since 2015,
with a total of > 5200 citations and an h-index of 35.
(11 as first author, 3 as second author led by an advised student/postdoc)

A detailed publication list is also available on [NASA/ADS](#).

KEY PUBLICATIONS (CITATION COUNTS AS OF JULY 2026, NASA/ADS)

- [The X-SHOOTER/ALMA Sample of Quasars in the Epoch of Reionization. I. NIR Spectral Modeling, Iron Enrichment, and Broad Emission Line Properties](#) (The Astrophysical Journal, 905:51, 2020; 112 citations)
Authors: Schindler, Jan-Torge, and Farina, Emanuele Paolo, and Bañados, Eduardo, ... (abridged)
This publication presents the rest-frame UV spectroscopic properties of a large sample of $z \gtrsim 6$ quasars. Our results show that the central parts of these galaxies are already iron enriched. Additionally, we find evidence for a prevalence of fast winds and outflows compared to the lower- z population. My contributions: Conceptualization, Data Reduction; Analysis; Writing (original draft, review, editing)
- [The Pan-STARRS1 \$z > 5.6\$ Quasar Survey. III. The \$z \approx 6\$ Quasar Luminosity Function](#) (The Astrophysical Journal, 943:67, 2023; 50 citations)
Authors: Schindler, Jan-Torge, and Bañados, Eduardo, and Connor, Thomas, ... (abridged)
With this publication we present the tightest constraints on the quasar luminosity function at $z \sim 6$. Our results underline the strong decline of the quasar volume density towards high redshifts and that their contribution to hydrogen reionization is sub-dominant. My contributions: Conceptualization; Data Reduction; Methodology; Analysis; Writing (original draft, review, editing)
- [A little red dot at \$z = 7.3\$ within a large galaxy overdensity](#) (Nature Astronomy, 9:1732, 2025; 27 citations)
Authors: Schindler, Jan-Torge, and Hennawi, Joseph F., and Davies, Frederick B., ... (abridged)
In this publication we present the discovery of a Little Red Dot that is embedded in a large galaxy overdensity. Our results imply that Little Red Dots can live in quasar-like environments and may serve as the obscured precursors of ultraviolet-luminous quasars. My contributions: Conceptualization; Data Reduction; Analysis; Writing (original draft, review, editing)
- [A first look at quasar-galaxy clustering at \$z \simeq 7.3\$](#) (Astronomy & Astrophysics, 708:A160, 2026; 9 citations)
Authors: Schindler, Jan-Torge, Hennawi, Joseph F., Davies, Frederick B., ... (abridged)
With this study we extend quasar clustering measurements (quasar-galaxy cross-correlation) to redshifts $z \gtrsim 7$ for the first time. Our results indicate that quasars are hosted in massive dark matter haloes, $\log(M_{DM}/M_{\odot}) = 11.6$ and that they have duty cycles of $f_{duty} \approx 0.05\%$, indicating very short quasar life times $t_q \simeq 10^6$ yr. My contributions: Conceptualization; Data Reduction; Analysis; Writing (original draft, review, editing)
- [QUEST: Quasar unsupervised encoder and synthesis tool: A machine-learning framework for generating quasar spectra](#) (Astronomy & Astrophysics, 709:241, 2026; 2 citations)
Authors: Guarneri, F. and Schindler, J. T. and Meyer, R. A., ... (abridged)
This paper presents a generative model for quasar spectra based on an information maximizing variational autoencoder (Info-VAE). Led by my current postdoc, it establishes the basis for our supervised Euclid high- z quasar selection strategy. QUEST generates synthetic spectra, which we use to simulate Euclid quasar photometry. Included to demonstrate current, active supervision. My contributions: Conceptualization; Supervision; Methodology; Writing (review, editing)

FIRST AUTHOR PUBLICATIONS IN REFEREED JOURNALS

11. **Schindler, Jan-Torge**, Hennawi, Joseph F., Davies, Frederick B., Bosman, Sarah E.
